

DAV NORDIC A/S DELIVERS PARTICULARLY NARROW NOISE SCREEN FOR E45

Noise screen with larch wood trellis, 379 m

DAV NORDIC A/S has supplied and installed a 379 m noise screen along the E45 at Munkdrup. The Municipality of Randers has a newly developed residential area which was to be protected against noise from the highway, and due to lack of space, it was a requirement that the noise screen was very narrow. The delivery is subcontracted to A. Enggaard A/S and is a 4 m high noise screen consisting of aluminium cassettes with larch wood trellis on both sides. The screen has been selected by the Road Directorate and is part of a larger section that has been noise controlled. The screen is selected because it is particularly narrow and easy to install despite tight space conditions.

A. Enggaard highly satisfied

A. Enggaard A/S is very pleased with DAV NORDIC A/S and Kasper Dorin Jacobsen, who was the project manager on the project says: "We have had a good collaboration with DAV NORDIC A/S. They have been good at getting the project to go smoothly in the field. I wouldn't mind working with them another time."
