ALUMINIOWY PANEL AKUSTYCZNY

ALUMINIUM ACOUSTIC PANELS

COATING

BUD-MASZ®

BUD-MASZ introduced an innovative technological solution in 2007.

Aluminium sheets are coated on both sides directly in the metallurgical process, in the HOT AC technology [Coils and sheets are degreased and chromium free electrochemically treated on both sides (Hydro Hot AC)].

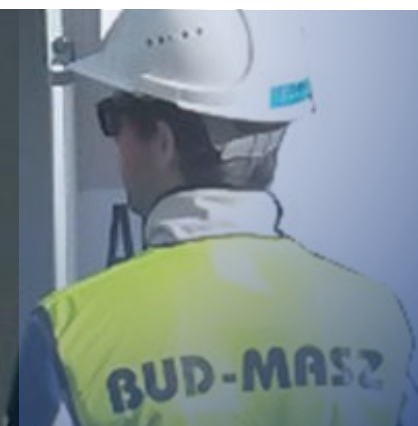

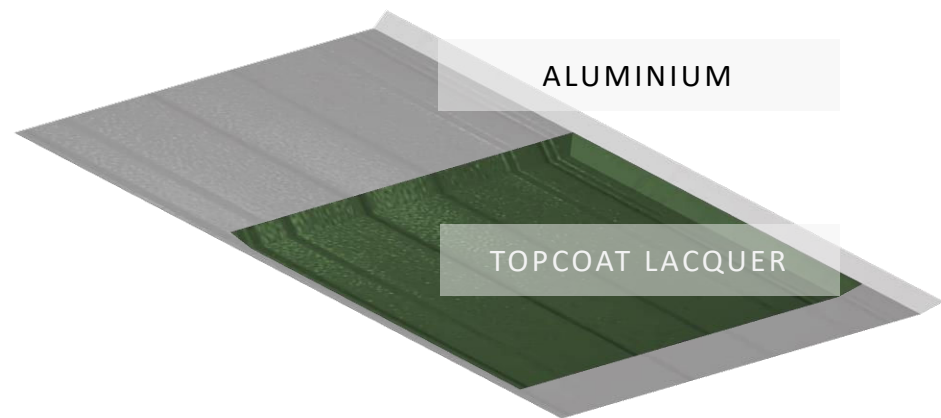

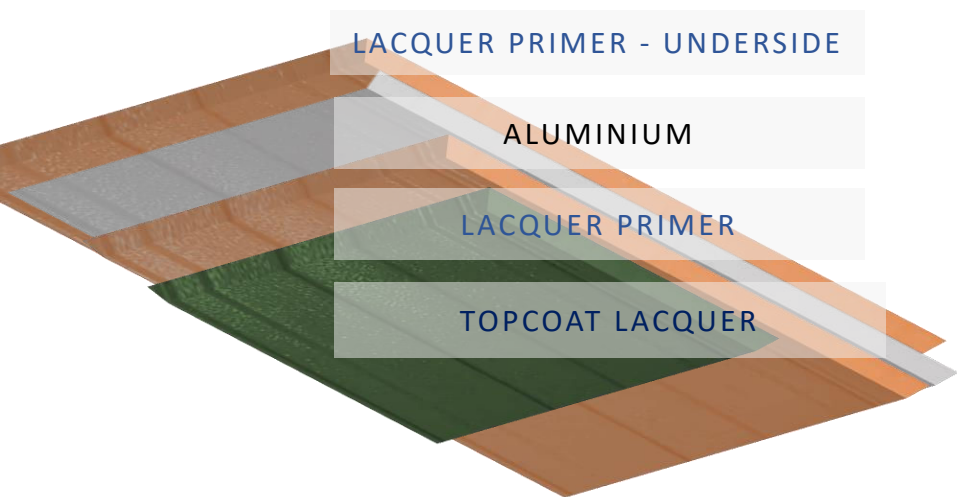

Owing to this technology, the durability of the coatings has been significantly increased.

In contrast to sheets painted after the profiling process, aluminium sheets lacquered before profiling have a coating of constant thickness.

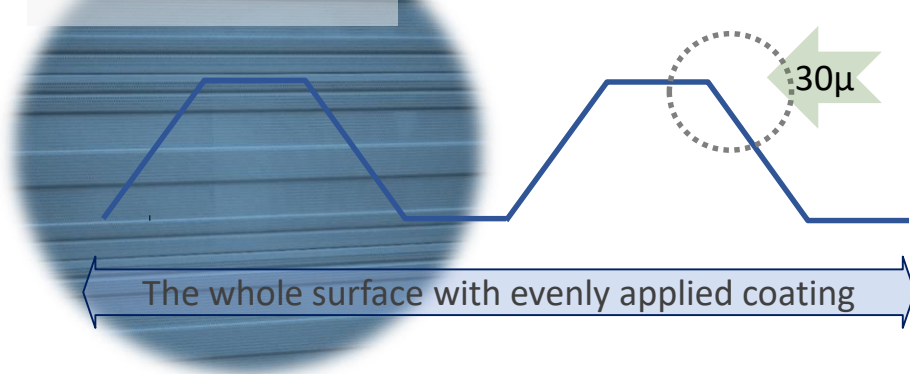

What makes BUD-MASZ exceptional is also the lacquer primer applied on both sides, thanks to which the aluminium is additionally protected against erosion.

3* PROTECTIVE LAYERS

1* PROTECTIVE LAYER

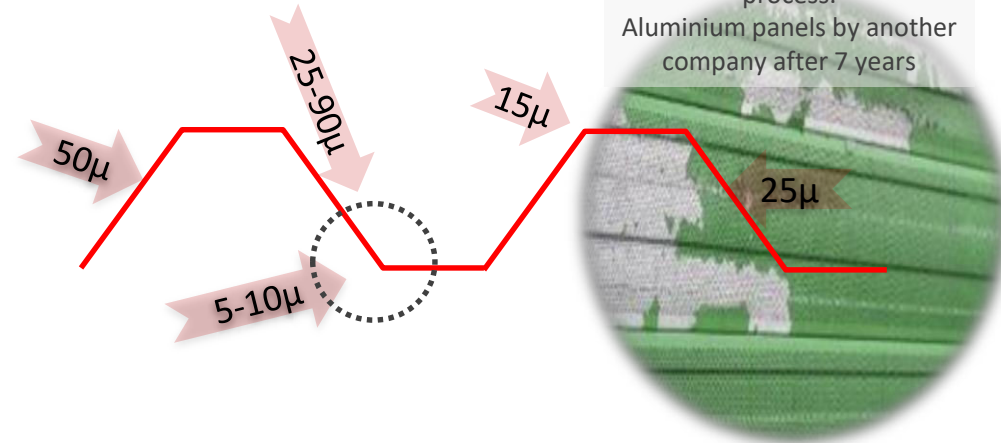

Aluminium panels BUD-MASZ
HOT AC technology
After 11 years

Coating before the profiling process— even coating on both sides. BUD-MASZ HOT AC technology.

Coating after the profiling process.
Aluminium panels by another company after 7 years

Coating after the profiling process – eg. powder coating: separation of paint because of cracks caused by uneven coating on bends.

RESISTANCE TO
ATMOSPHERIC
CONDITIONS AND UV

ANTI-GRAFFITI TYPE
COATINGS

100% RECYCLING

GUARANTEE UP TO 10
YEARS

ALUMINIUM ACOUSTIC PANELS

ADVANTAGES

More than 2 000 000 square metres of acoustic panels have been installed since 1998. Noise barriers and acoustic casings made of them are part of over 1100 implementations in Poland and in Europe.

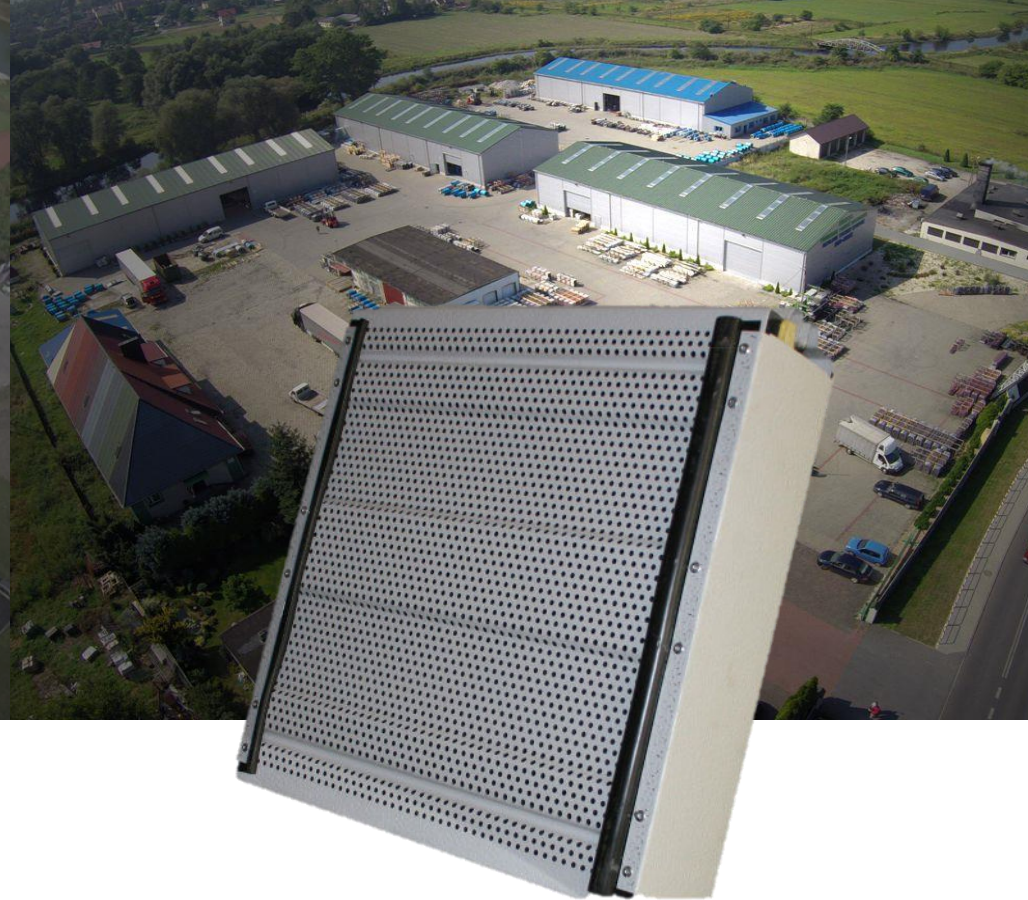

Thanking our customers for 25 years of cooperation, we guarantee that our brand is synonymous with:

- The highest world quality of the products confirmed by certificates and opinions of customers,
- Technical thought leadership based on the latest technologies and components from reputable companies worldwide,
- Ultramodern machinery (CAD+CNC technology),
- Guaranteed service, warranty and post-warranty service,
- A clear focus on the client's needs and wishes
